Azure Virtual Machine (VM) Creation

1. Introduction

This document describes the steps followed to create a Virtual Machine (VM) in Microsoft Azure. Azure Virtual Machines allow users to run applications and services in the cloud.

2. Prerequisites

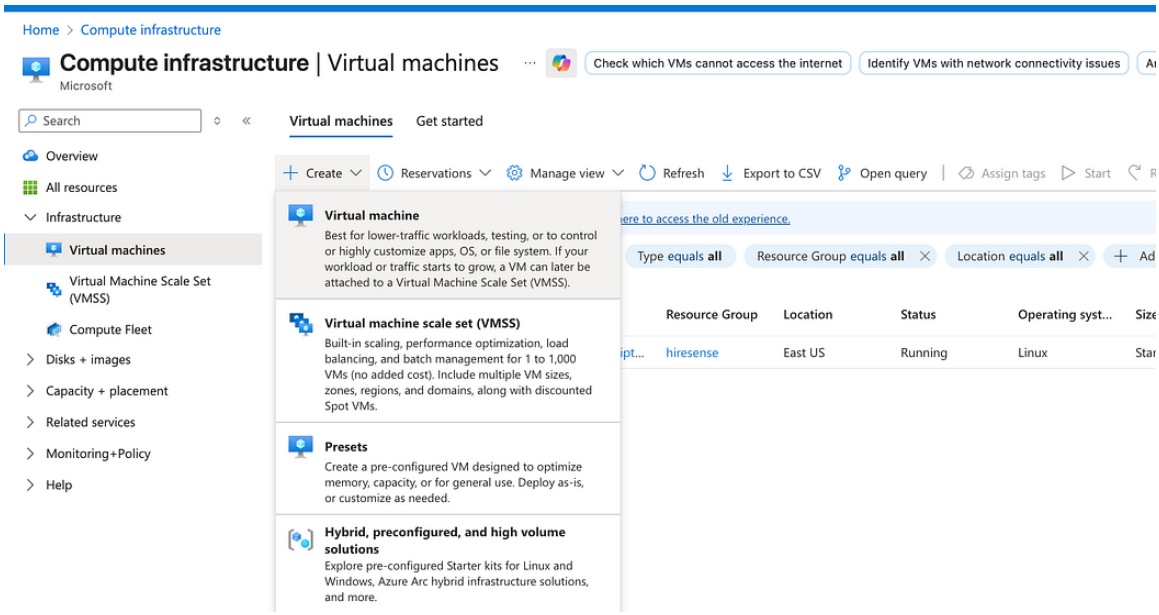
- Azure account
- Access to Azure Portal
- Basic knowledge of cloud computing

3. Steps to Create VM in Azure

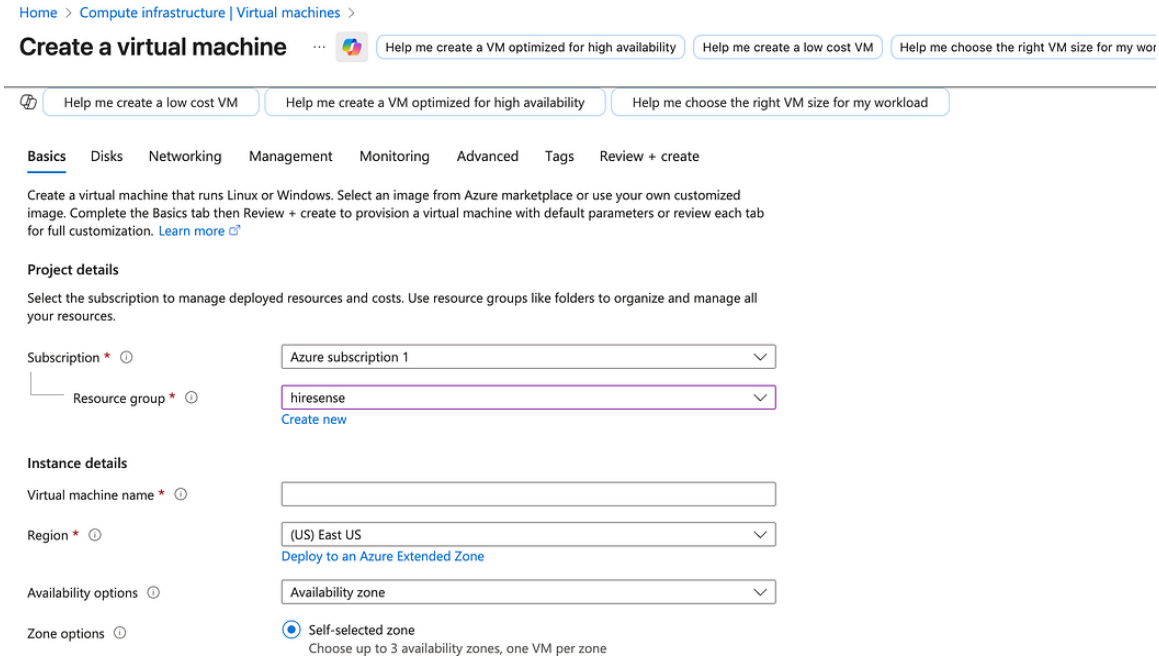
Login to Azure Portal.

Click on 'Create a resource'.

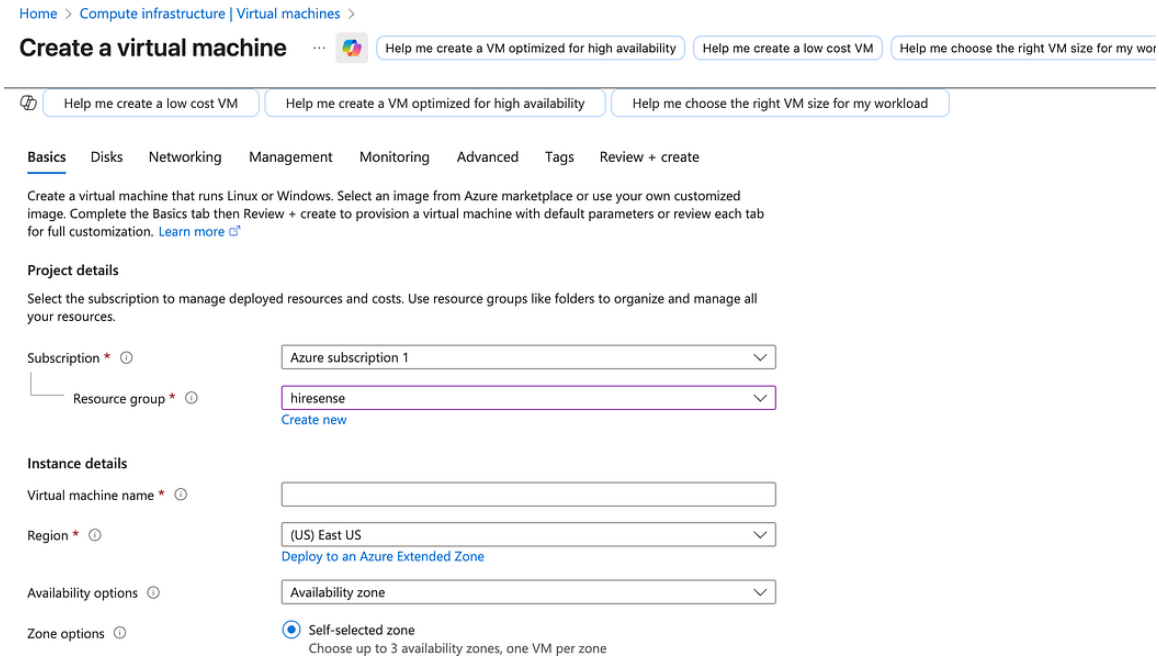
Select 'Virtual Machine'.



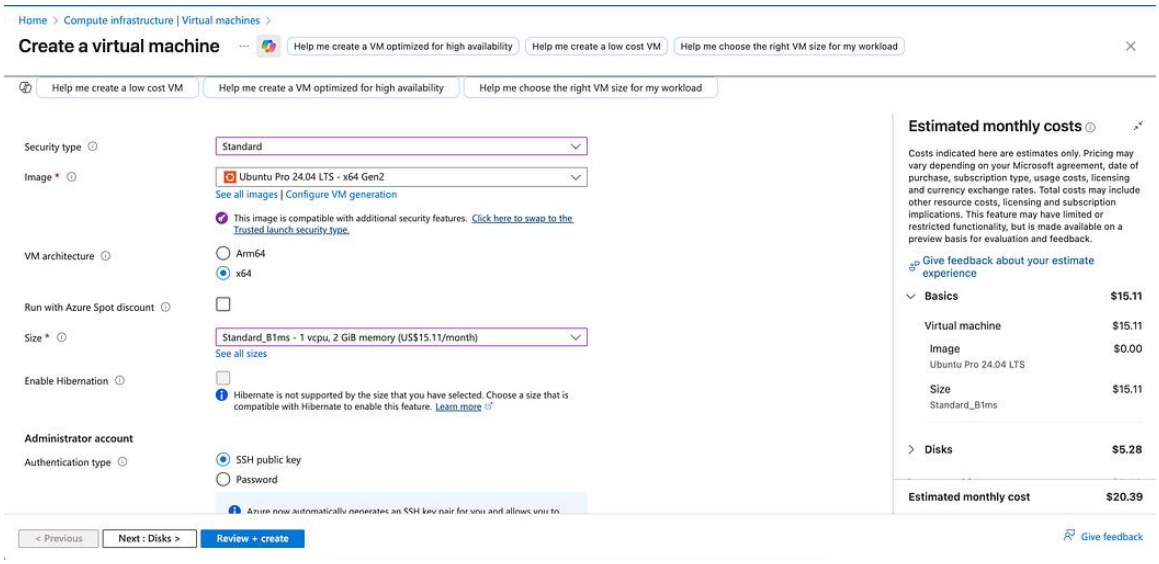
Choose subscription and resource group.



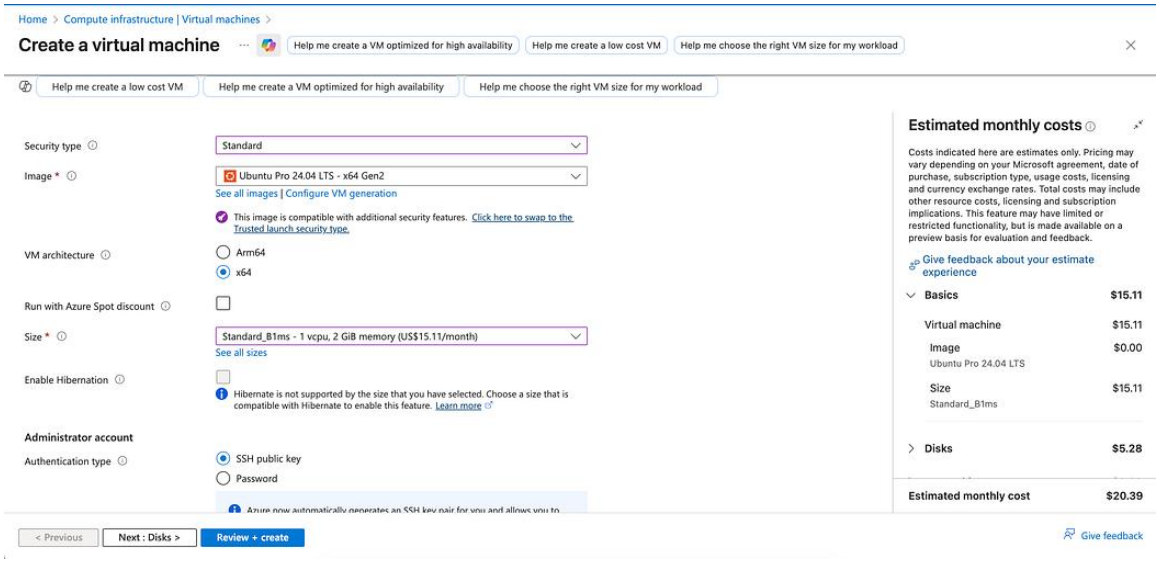
Enter VM name and select region.



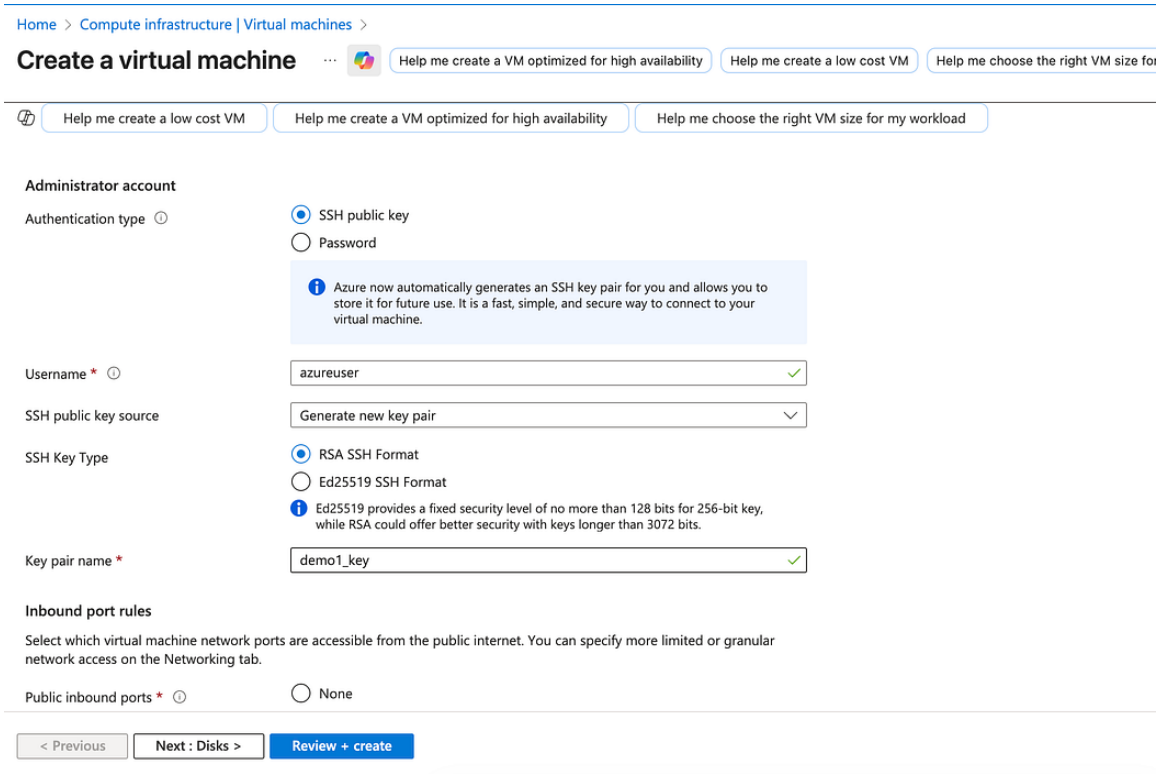
Choose image (e.g., Ubuntu/Windows).



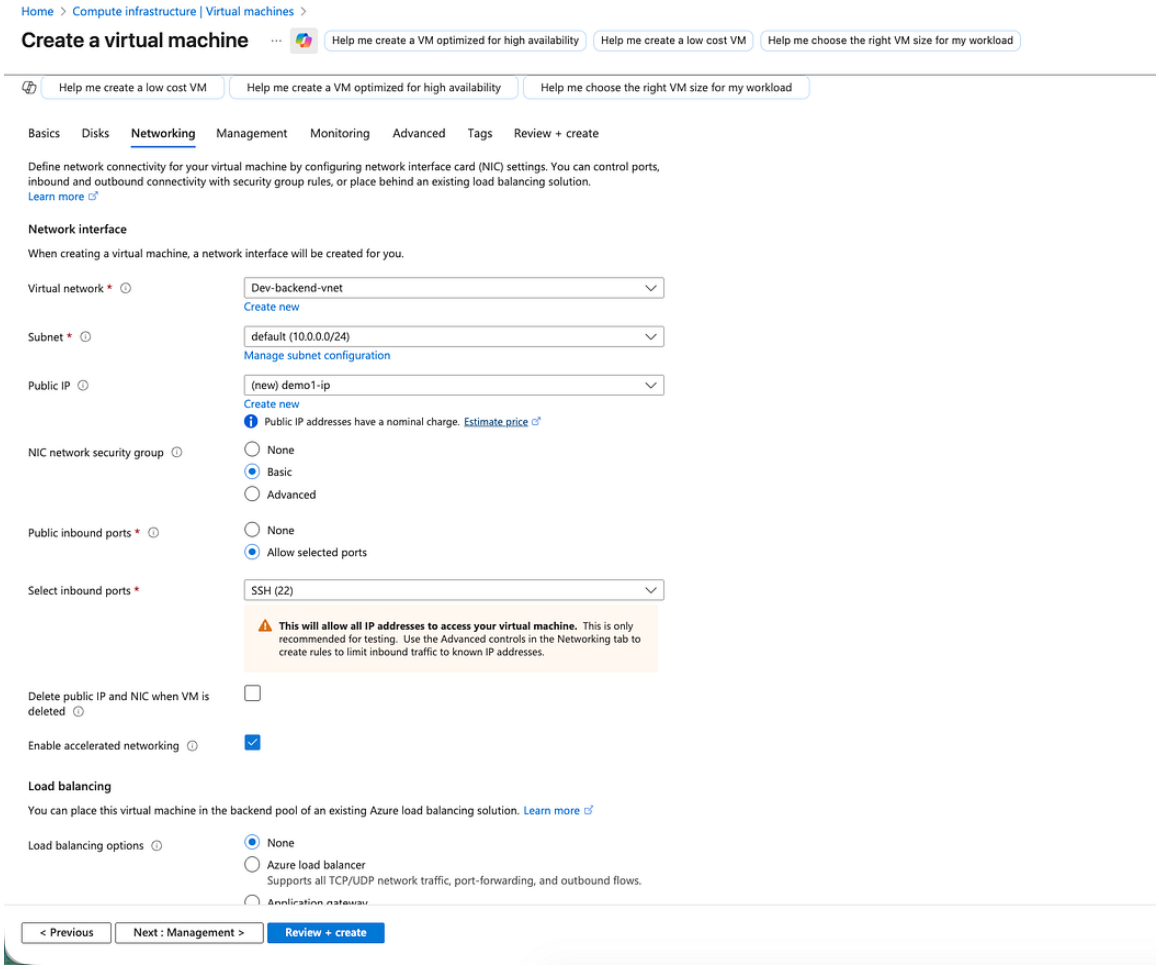
Select VM size based on requirements.



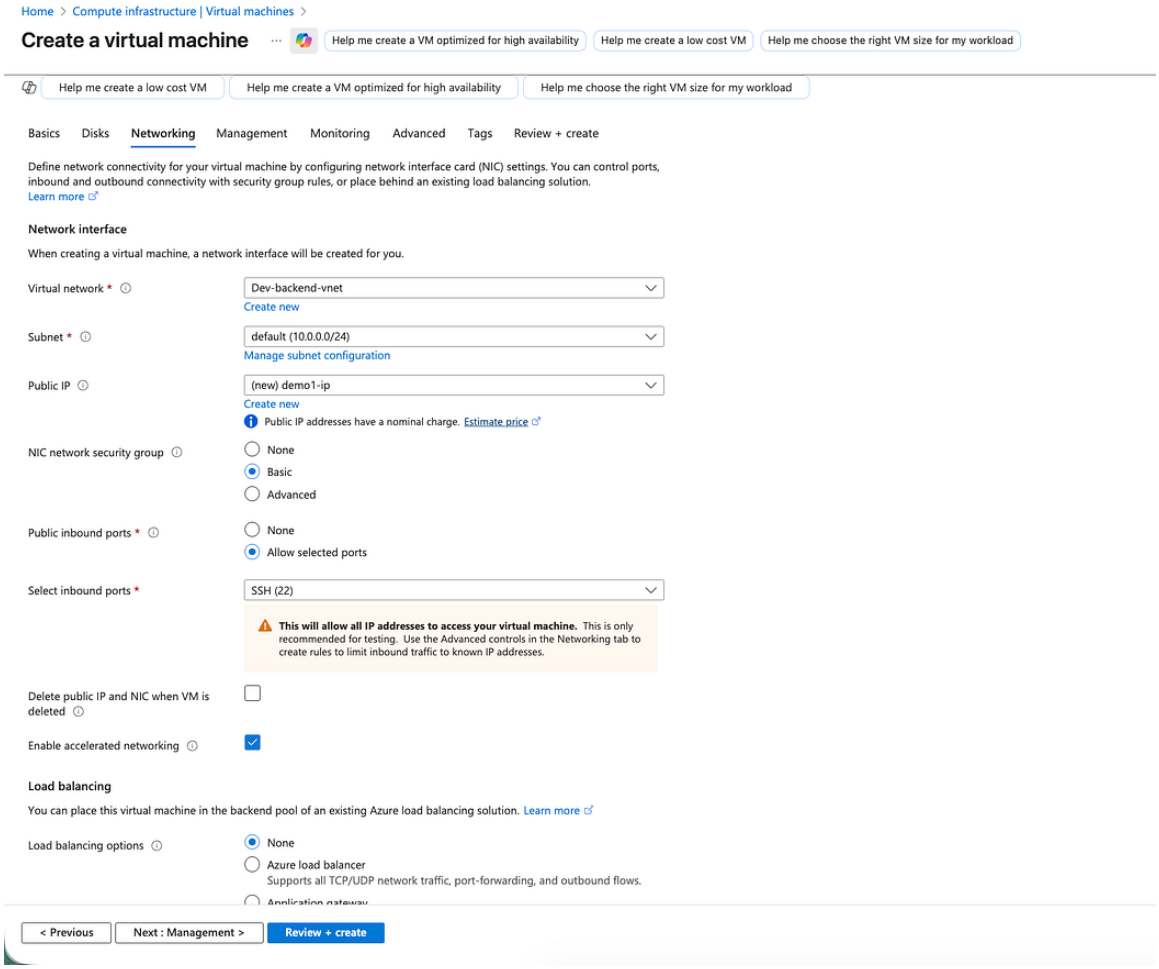
Configure authentication (username/password or SSH key).



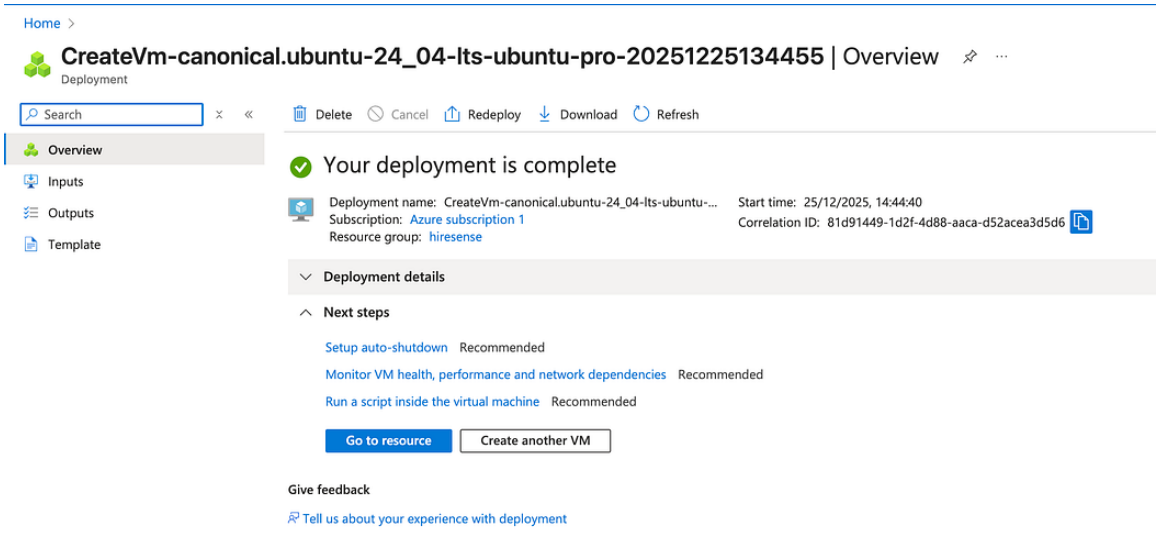
Configure inbound ports (e.g., SSH - 22, HTTP - 80).



Review and create the VM.



Wait for deployment to complete.



4. Post Deployment Steps

- Connect to VM using SSH or RDP.
- Install required software.
- Configure applications.

5. Conclusion

The Azure VM was successfully created and is ready for use. It can be used for hosting applications, testing environments, or data processing tasks.
